

APPLIANCE / SCOPED ONBOARDING

Your network. Your appliance. A bounded setup.

\$999 per appliance, or \$1,499 per appliance with scoped onboarding. Both prices are USD and one time.

Hardware included

Enclosure, cooling, power supply, installed gateway, and setup guidance. **Coming soon: planned rollout early 2027.** Reserve with a fully refundable \$49 deposit, credited toward purchase. Cancel anytime before fulfillment for a full refund; email the owner with your Stripe receipt. All payments use Stripe. The date is a target; delivery requires hardware qualification and confirmed arrangements.

The onboarding bundle

Includes the appliance and up to 3 hours of remote onboarding for one provider and one supported application. It replaces the standalone appliance purchase for that unit. Calls, configuration, checks, and handoff count against this allowance.

Step	Included work
Prepare	Name the operator; check ready network, power, authorized provider account, approved test inputs, and acceptance scope.
Connect	Connect one provider and one supported application; configure initial identity, model, secret, and budget policies.
Verify and hand over	Run an allowed and denied request; inspect attributable metadata; hand over operator instructions and open issues.

Customer responsibilities

Supply the network, power, authorized accounts, unique identities, approved policy/test data, and a named operator. Do not send credentials or customer prompts through public forms or issues. Private access requires an approved method and minimal privileges.

Scope limits

Custom integrations, network redesign, data migration, on-site visits, and ongoing operations are excluded. Pause for missing prerequisites and record unfinished work when the allowance is exhausted. No extra charge is authorized by this scope.

MANAGED SITE / SUPPORT ALLOWANCE

Defined help for one site.

\$499 USD per site per month, including the associated Cloud workspace, device-health monitoring, qualified updates, recovery guidance, and 1 hour of remote assistance per billing month.

Site and allowance

A site is one agreed physical location or isolated customer deployment recorded at activation. Additional appliances at that site do not create another site subscription; operating capacity must still be confirmed. Calls, investigation, troubleshooting, and configuration work count toward the allowance. Unused time does not roll over.

Business hours and response

Support hours are Monday-Friday, 9 am-5 pm America/Chicago, excluding local public holidays. Response target: within 2 business days, meaning acknowledgment and a next step. Resolution time depends on the issue.

Included and excluded work

Included: configuration and policy guidance, troubleshooting, recovery guidance, and qualified update assistance. Excluded: custom development, on-site work, round-the-clock response, replacement hardware, and work beyond the allowance. Appliance hardware, model-provider usage, customer infrastructure, and applicable taxes are separate.

Cloud and renewal

Standalone Cloud is \$49.99 USD per workspace per month. A managed site has no additional subscription charge for its included workspace. Software is \$0. Cloud and managed sites renew monthly until canceled; email the owner before the next renewal with your subscription reference. The current paid period, appliance ownership, and free software remain available.

Activation follows qualification

Confirm the covered site, appliances, supported workflow, delivery capacity, operating coverage, and start date before payment. Cloud activation and managed monitoring require validation. Pricing does not establish a production SLA, compliance certification, guaranteed savings, or customer demand.
