

SOFTWARE / CLOUD / APPLIANCES

Keep the coding clients. Govern their model requests.

Hormuz is an Apache-2.0 policy, usage, and evidence gateway for supported coding-client workflows.

The governed path

Client requests pass through identity, policy, secret and budget checks before allowed provider egress. Company provider keys stay on the gateway. Routine ledgers retain metadata rather than prompts or responses. Bypassed traffic is outside coverage.

The complete price catalog

Offer	Price in USD
Software	\$0
Cloud	\$49.99 / workspace / month
Appliance, including SSD	\$999 / appliance, one time
Appliance with SSD and scoped onboarding	\$1,499 / appliance, one time
Managed site	\$499 / site / month

Onboarding includes up to 3 hours of remote setup for one provider and one supported application. A managed site includes its Cloud workspace and 1 hour of remote assistance per billing month, with a response within 2 business days.

Availability and responsibilities

Appliances: **coming soon, planned rollout early 2027** (not a guaranteed shipping date). **Reserve yours: \$49 one-time refundable deposit**, credited toward purchase. Cancel anytime before fulfillment for a full refund; email the owner with your Stripe receipt. All payments use Stripe. Delivery and qualification are confirmed before the balance. Cloud and managed services accept inquiries. Provider usage, infrastructure, and taxes are separate.
